# Low Coupling

Saving/Storing an Event to the Event Database would be a function of User/Organiser if assigned by the Information Expert.
This would cause the User/Orgniser class to perform database operations and results in high coupling.

High Coupling Pattern:

OrganizeEvent() ——— Organiser ——— CreateEvent() ——— Event

StoreEvent() ——— Store Event

Low Coupling Pattern:

Low Coupling is achieved and the event will be stored eventually once the event is created with necessary details.

OrganizeEvent() ——— Organiser ——— CreateEvent() ——— Event

StoreEvent() ——— Store Event
